

## Case History

# Nomura International chooses Rainbow

Nomura International plc recently choose ISS Restoration as its partner for ensuring the standard of their highly prestigious head office in London was kept at a premium.

The scope of works included specialist cleaning of Yorkstone floors on 11 different levels, as well as cleaning the hallways, corridors and lift lobbies throughout the building.

Based in London, and with offices in all major financial centres across the region, Nomura work closely with their Asian and American networks, as well as with Tokyo, to provide clients with solutions to their financing needs, covering four business lines – Global Markets, Investment Banking, Merchant Banking and Asset Management. Due to the very sensitive nature of the work undertaken in the building and also to ensure business continuity, the work was undertaken on a 5 day week night shift whilst the offices were closed, utilising the “clear time” between 22.00 and 06.00 hours to effect the cleaning programme.

The Nomura building has over 4,000 offices incorporated into its main HQ which overlooks the River Thames. The project was ongoing for 3 months and was intended to improve the appearance prior to a full strip down and reseal of the Yorkstone floors.

In addition to this particular cleaning project, ISS also supplies a wide range of integrated Facility Management services to Nomura International.
